Keep Your Deal Secure With EthosData

Using EthosData, dealmakers can close their M&A, IPO or fundraising deal faster. Our award-winning service combines easy-to-use data rooms with experienced teams of professionals, all to simplify financial transactions.

Keeping deals safe, secure and confidential is paramount to this. It's why we have set enterprise grade security standards for everything we do. Our processes. Our people. Our platform. All so we can safeguard your deal from unauthorised access.

EthosData simplifies transactions so you can close your deal faster

EthosData's Three Pillars Of Security

Process Security

Document Security

Infrastructure Security

EthosData combines easy-to-use data rooms & expert team of professionals

I. Document Security:

After just a 5-minute set-up, you can protect all your information and then easily share, control and track who can access, edit, copy, print or forward a deal's documents.

With EthosData, you can also:

o Quickly assign different roles and responsibilities to multiple parties.

o Protect all file formats with passwords, personalised watermarks and customisable NDAs.

o Revoke document access even after a user has opened a file.

o Track all activity with audits.

II. Infrastructure Security:

The bedrock of exceptional security is the platform and its infrastructure. Our virtual data room service exceeds the strictest security standards set by regulators, and expected by clients.

Our data rooms are:

o Developed following the OWASP Top 10 security guidelines.

o Certified to International standards of ISO 27001 and SOC 1, 2 and 3 audited.

o Data centers physically secured by biometric access and monitored 24/7.

o AES 256bit encrypted in transit and at rest, the strongest in the sector.

o Continuously monitored and protected by firewall mechanisms, virus scanning and intrusion detection software.

Virtual Data Room Services

III. Process Security:

Our processes and technology have been audited by many of the leading financial institutions and law firms.

A dedicated DataRoom Specialist - who handles all user, permission and document management for you - undergoes background checks and training that follows the same compliance process found in banks.

"We have worked with EthosData's Virtual Data Room for different sales and Due Diligence processes. Outstanding security standards and very easy to manage."
